

International Islamic University Chittagong (IIUC)
Department of Electrical and Electronic Engineering

(Project/Thesis Proposal)

Application for the Approval of Project/Thesis Proposal

1.	Group No.:			
2.	Name of Students	Matric ID	Mobile	Email
	i.			
	ii.			
	iii.			
3.	Name and designation of the Supervisor:			
4.	Date of Assigning Supervisor:			
5.	Date of Proposal Submission:			
6.	Tentative Title:			
7.	Introduction: The introduction should provide the background and context of the proposed project/thesis. It should: i. Introduce the application area or engineering problem. ii. Explain the significance and motivation of the study. iii. Briefly describe the current state of the technology or research. iv. End with a brief overview of the proposed solution or approach. <i>The introduction should not exceed 400 words.</i>			
8.	Literature Review: The literature review should demonstrate an understanding of existing research and technologies related to the proposed work. It should: i. Review relevant journal articles, conference papers, books, or technical reports. ii. Summarize existing methods, algorithms, systems, or technologies. iii. Compare previous works by highlighting their strengths and limitations. iv. Organize the review logically (e.g., chronologically or by topic), rather than discussing papers one by one. v. Cite all sources using the prescribed referencing style. Use recent and high-quality references (maximum 20 most relevant and recent references), preferably from the last 5–10 years, unless citing classical or foundational works.			
9.	Problem Statement/Research Gap: Clearly identify the engineering problem that your thesis/project intends to solve. This section should: i. Explain the limitations or shortcomings of existing methods or systems. ii. Clearly define the specific problem to be addressed. iii. Ensure that the identified problem is consistent with the literature review. The problem statement should be concise, specific, and supported by evidence from the literature.			

10.	Objectives with specific aims: State the objectives of the project clearly and concisely. • Begin with one general objective describing the overall goal of the project. • Follow with 2–3 specific objectives that describe the individual tasks required to achieve the general objective. • Use measurable action verbs such as design, develop, implement, analyze, evaluate, compare, optimize, validate, or investigate. • Ensure that each objective is realistic, achievable within one year, and aligned with the identified problem.
11.	Proposed Methodology: Describe how the proposed objectives will be achieved. The methodology should present the overall engineering approach and demonstrate the feasibility of the proposed work. Focus on the design and development strategy rather than detailed implementation. Include a block diagram, flowchart, system architecture diagram, or research framework to clearly illustrate the proposed methodology. The methodology should provide sufficient detail to demonstrate that the proposed work is technically sound, feasible, and achievable within the project duration, without presenting detailed implementation or experimental results.
12.	Gantt Chart: The duration of the Final Year Project/Thesis is 12 months (1 year). Prepare a Gantt chart that presents the planned timeline and major phases of your project/thesis. The chart should include both the activities completed before proposal submission and the planned activities for the remaining period, demonstrating that the entire project can be completed within the allocated one-year duration. When preparing the Gantt chart, follow these guidelines: - The project proposal is submitted after approximately 4 months of work. Therefore, the Gantt chart should include: - Activities completed before proposal submission. - Activities planned for the remaining period after proposal approval. - Use months as the time scale. - Divide the project into clear and logical phases. - Arrange the activities in a realistic sequence. Where appropriate, show overlapping activities. Recommended Phases of Work: The Gantt chart should, where applicable, include the following phases: - Topic selection and problem identification - Literature review - Proposal preparation and presentation - Requirement analysis and methodology development - System design (hardware/software/algorithm) - Simulation and/or implementation - Experimental setup and data collection (if applicable) - Testing, verification, and validation - Results analysis and performance evaluation - Thesis writing and documentation - Thesis revision - Final thesis submission, presentation, and defense N.B. Prepare your Gantt chart carefully, as it will be used as a reference throughout the project. During the final defense, the examiners will assess whether the project was completed according

	to the proposed timeline and sequence of activities. Adherence to the approved schedule is an assessment criterion, and marks will be awarded accordingly.
13.	References: Reference Style Use the IEEE reference style throughout the proposal. List all references at the end of the document under the heading References. References should be numbered sequentially according to the order in which they first appear in the text. Examples: Journal Article [1] A. B. Author and C. D. Author, "Title of the paper," Journal Name, vol. xx, no. xx, pp. xx–xx, Year. Conference Paper [2] A. B. Author, "Title of the paper," in <i>Proceedings of the Conference Name</i> , City, Country, Year, pp. xx–xx. Book [3] A. B. Author, Title of Book, xth ed. City, Country: Publisher, Year. Book Chapter [4] A. B. Author, "Chapter title," in Title of Book, xth ed., A. Editor, Ed. City, Country: Publisher, Year, pp. xx–xx. In-Text Citation Style Cite references in the text using the corresponding reference number enclosed in square brackets, e.g., [1], [2], or [3]–[5]. References should be cited in numerical order based on their first appearance in the text. Use the same reference number whenever the same source is cited again.
14.	Justification of the problem as Complex Engineering Problem: ** Please note that your research problem must be a complex engineering problem. You have to identify which WP's and WA's will be addressed in your research with proper justification.
15.	Budget (if any):

Signature of the Students

Signature of the Supervisor

Signature of the Convener, Thesis/Project Committee
