

Department of Electrical and Electronic Engineering
International Islamic University Chittagong
PRE DEFENSE ARRANGEMENT FORM

Group No: A250

PART I: TO BE COMPLETED BY THE CANDIDATE

Title of Thesis/Project	An Ultra-Low-Power 10-Transistor 1-Bit Magnitude Comparator Using Gate Diffusion Input Technique		
Student Name, ID, and Phone number	Sharea Hossain	ET223104	01859492439

PART II: TO BE COMPLETED BY THE SUPERVISOR (Kindly tick the appropriate)

Name of The Supervisor	Recommended	Not Recommended	Signature
Engr. Riazul Islam	☒	☐	

PART III: TO BE COMPLETED BY EXAMINERS

Examiners' Comment: Please make comment on following points

- * Validity of the thesis/project as complex engineering problem: *The complex engineering justification has not been addressed at all. This must be properly understood, and then the entire section must be rewritten.*
- * Report Organization: *OK*
- * Literature Review: *too much overlap with introduction. correct it.*
- * Methodology and Outcomes: *① thesis report shows propagation delay 3360 but technology scaling reports 25.5ns at 180nm, 25.5ns at 90nm and 25.55 at 45nm, that are different so evaluation needed. correct the table. ② unusual power dissipation for TGL circuits, check the connection. ③ Draw scanner test function verification mismatch.*
- * Presentation Slide: *① In literature review, use fewer words and provide clear comparison of previous studies. ② Methodology → Explain design steps and setting (simulation) more clearly.*
- * Contribution and others (if any): *① the flowchart is too small to explain the work effectively. make it larger. slide-11-13 - include truth table.*

OK

RECOMMENDED

CONDITIONALLY RECOMMENDED

NOT RECOMMENDED

Signature of Examiner

Signature of convener (Thesis/Project Committee)
